This is an introductory course in the basics of photography. You will obtain:

- a working knowledge of your digital camera
- an understanding of how light is essential
- an understanding compositional skills
- an understanding of how to edit your photos
- a brief history of photography

We will do:

- Contemporary digital technology, through the use of cameras and editing software.
- In addition to skill development, emphasis will be given to enhancing students aesthetic understanding and creative vision

Give it your best SHOT!

- Photography requires that you take pictures! You must plan your time to go out with your camera(s) and take images for your assignments.
- Additional production time outside of class WILL BE NECESSARY in order to complete assignments.
- Be aware that MULTIPLE projects will be in progress at any one time.
- We may have a “critique” for each project upon completion.
- There will be opportunities for you to showcase your work outside of school.

In School vs. At Home

- Often times you will have multiple projects going on at once. Potentially projects geared towards the school setting and projects geared towards what could be completed at home.
- Weekly at home assignments can be found in teams under the “Weekly Assignments” tab. This serves as a reminder of what was discussed in school.
- There will often times be actual assignments under the “Assignments” tab as well that has a due date.
- Any questions to this process you can always email me 😊
